

# Secure Your Data, Govern Your AI, and Reduce Your Compliance Risk

Establish the governance, security, and compliance controls needed to deploy AI while protecting sensitive information and reducing operational risk.

## Why AI Governance Matters

**62%** of organizations say a lack of data governance is the main challenge inhibiting their AI initiatives.

— KPMG, *Data Governance in the Age of AI, 2025*

**13%** of enterprises report strong visibility into how AI interacts with their data.

— Cyera, *2025 State of AI Data Security Report*

**4x** higher breach rate (43% vs. 11%) at organizations where AI significantly expanded the number of identities requiring data access.

— Netwrix, *2026 Data and Identity Security Report*

## Establish Your Trusted Foundations for AI

AI can amplify existing data governance challenges, exposing oversharing, inconsistent permissions, and protection gaps across your environment. XTIUM's AI Data Governance & Compliance service helps your organization establish the security, governance, and compliance controls needed for responsible AI adoption.

From data classification and loss prevention to insider risk management and AI-specific controls, your organization gains the visibility, protection, and documentation required to move from experimentation to production — with the confidence, transparency, and accountability stakeholders expect.

## Governance Controls Implemented

- Configure sensitivity labels, DLP policies, and AI governance controls across M365 environments.
- Identify oversharing risks and remediate priority exposure before expanding enterprise AI adoption.
- Deploy insider risk management and monitoring tuned for emerging AI-specific security threats.
- Receive audit-ready documentation supporting ongoing operational accountability requirements.

### How We Get You There

Assessment

Configuration

Remediation

Validation

A governed data foundation that supports AI initiatives while reducing risk.

### Reduce Risk, Accelerate Adoption

- ✓ Establish enforceable governance controls prior to AI tools increasing visibility into sensitive data.
- ✓ Gain clear insight into data exposure, permissions, and AI access risks enterprise-wide.
- ✓ Strengthen compliance readiness with consistent support for regulatory and audit requirements.
- ✓ Leverage certified specialists to implement solutions faster without overburdening internal IT.
